REASONS FOR ALLOWANCE

1. This is an Examiner's statement of reason for allowance.
2. Regarding the claimed terms, the Examiner notes that a "general term must be understood in the context in which the inventor presents it." *In re Glaug* 283 F.3d 1335, 1340, 62 USPQ2d 1151, 1154 (Fed. Cir. 2002). Therefore the Examiner must interpret the claimed terms as found on pages 1-72 of the specification. Clearly almost all the general terms in the claims may have multiple meanings. So where a claim term "is susceptible to various meanings, . . . the inventor's lexicography must prevail . . ." *Id.* Using these definitions for the claims, the claimed invention was not reasonably found in the prior art.
3. The closest prior art Tang, John (U.S. PG Pub 2008/0276196 A1) which discloses a personal display system with which a user may adjust the configuration of displayed media. However, Tang singularly or in combination fails to disclose the recited feature:

As per claims 1, 3, 20, 21, 23, 24, 25, 30, and 31 "a switch between said first game image which is being displayed on said first display portion and a second game image which is being displayed on said second display portion, and respectively displaying the images on said second display portion and said first display portion when a determination is made that said first game image becomes the object to be operated on

Art Unit: 3718

the basis on the coordinate data, and a game process on said game image displayed on second display portion on the basis of the coordinate data, wherein the first game image displayed on said second displayed portion is changed on the basis of the coordinate data”.

As per claims 27 and 29 “ a first image displayed on the first display screen and a second image displayed on the second display screen to be respectively displayed on the other display screen when the first image becomes an operational object based at least in part on the coordinate data related to the interaction position on the second display screen”.

As per claim 28 “animate movement of the virtual game object from the first display portion to the second display portion based on a received movement instruction, such that the virtual game object gradually transitions from the first display portion to the second display portion, and perform an action on the virtual game object based at least in part on the position of user input on the second display”.
